TrendMicro Sysclean Package instructions

If you are not a Trend Micro customer please download the following file.

➤ [Sysclean Package](#) 3.2MB

MD5 checksum: aaed44abf66e1d13161a45eb5b2be4d1

NOTE:

For instructions on how to use this package, consult the "How to Use" section of the readme file, [readme_sysclean.txt](#). This file also contains the description and the different features of this package.

Note that for the Trend Micro Sysclean Package to be effective, you must download and place the latest pattern file in the same folder as the Trend Micro Sysclean Package.

Trend Micro Sysclean Package

Trend Micro, Inc.

<http://www.trendmicro.com>

Date: Tue 10/23/2007

Time: 18:41:15

Time Zone: (GMT -08:00)

I. Description

This self-extracting archive is a stand-alone fix package that incorporates the Damage Cleanup Engine and Template. It replaces the traditional fix tool by addressing a wide variety of system infections rather than a specific malware infection.

This tool supports the following features:

- o Terminate all malware instances in memory
- o Remove malware registry entries
- o Remove malware entries from system files
- o Scan for and delete all malware copies in all local hard drives

II. File List

- o sysclean.com - the main executable module
- o readme.txt - this file
- o lpt\$vpn.XXX - downloadable component (see Requirements)

III. Requirements

1. Download the latest pattern file lpt\$vpn.XXX in ZIP format as lptXXX.ZIP from the following location:

<<http://www.trendmicro.com/download/pattern.asp>>

This file must be saved in the same folder where you run this fix package.

2. This tool is designed to run under Windows 9x/ME/NT/2000/XP/Server 2003.

For users running Windows NT 4.0, you need to copy the file, PSAPI.DLL, to the Windows system directory, which is usually C:\WINNT\system32. You can find the file in the Windows NT 4.0 Setup CD at the following locations:

\Support\Debug\i386\PSAPI.DLL

IV. Parameters

- /NOGUI No GUI (runs the tool in console mode)
- /SILENT Run in silent mode (no output display)
- <folder> The folder where the tool begins scanning. If unspecified, this tool scans all local hard drives
- /Y Automatically answers yes to all prompts
- /? Displays help information

V. How to Use

1. Create a temporary folder and copy SYSCLEAN.COM into this folder.

NOTE: This temporary folder should be created on a local or mapped drive.

2. Download latest pattern file. Extract the downloaded ZIP pattern file into the created folder.
3. Close all applications running on your system, including any

antivirus software.

4. Run the executable file, SYSCLEAN.COM, by either:
 - a. Double-clicking the tool in Windows Explorer.
 - b. Executing it via command prompt using syntax based on the aforementioned parameters.
5. Enable any antivirus software that is installed on your system and perform a manual scan.
6. If prompted for a reboot, please do so for the system to be successfully cleaned.

NOTE: This fix tool generates the log file, SYSCLEAN.LOG, in its current folder.

VI. History:

Version 1.00 - First release

VII. Compatibility

This tool has been tested under the following platforms:

Windows NT 4.0 Workstation and Server
Windows 2000 Professional and Server
Windows XP Home and Professional
Windows 2003 Server

VIII. Known Issues

None

IX. Additional Resources
