How can I update the Damage Cleanup Engine / Template files of Trend Micro PC-cillin Internet Security 2007 when my Internet connection is unstable?

Solution ID: 1032806
Product: PC-cillin Internet Security - 2007
Operating System: Windows XP
Published: 9/18/06 1:19 AM

Solution: You can update the Damage Cleanup Engine / Template files manually if you are experiencing poor Internet connection.

Do the following to update manually:

1. Download the latest [Damage Cleanup Engine](#) to your Desktop.
2. Extract the contents of the tsc.zip file to the C:\Program Files\Trend Micro\Internet Security 2007 folder.

Refer to [Compressing and extracting a file using WinZip](#) for instructions on how to extract files.

*Note: Click **Yes to all** when asked if you want to overwrite the files.*

3. Restart your computer.

To verify if the update was successful:

1. Double-click the PC-cillin icon beside your computer's system clock. This opens the PC-cillin Internet Security main console.
2. Click **Other Settings** on the left panel.
3. Click **Automatic Update** on the right, then click **Settings > Component Information**. This opens a window showing the latest DCE and DCT files installed in your computer.
